- Problem Statement ID – SIH26043
- Problem Statement Title- A digital platform to crowdsource societal challenges and facilitate collaborative problem solving through universities and industry partnerships.
- Theme-Disaster Management
- PS Category- Software
- Team ID-

Our Idea

- SANGAM is a citizen-driven platform where people identify real-world societal challenges, share them with evidence, and connect them with universities and industry to develop practical solutions.
- It guides users towards the appropriate authority , provides solution and RTI guidance and enables transparent issues tracking.

Innovation & Uniqueness

- SANGAM includes RTI matters.
- Universities can give suggestions for new projects.
- Groups can compete against each other to see who can solve the problem the fastest.
- Winning Group will get more points with government prize.
- Organisation will get universities recommendation.

How it address the problem

Technology stack

Methodology and process for implementation

See it,Share it,Improve it

Feasibility of the idea

- Built on proven widely used tech pwa +Firebase- no app store approval needed.
- No new infrastructure required - run on existing government devices/browser.
- Works on any phone with a browser app download friction.
- Voice input supports extends reach to low-literacy and elderly users.

**Potential challenges and risk**

- Low citizen adoption in early phase-network effect problem.
- False/duplicate report-risk of spam or malicious complaint.
- A single company can fund multiple universities for the same problem.
- Multiple organisations can post same problem.
- Any university can start research without joining the organisation.

**Strategies to overcome challenges**

- Adoption - Launch with ward-level pilot+local promotion.
- Company is allowed to fund only two universities on same problem.
- AI integration for detecting if the image is AI generated or not.
- A university needs to share the solution to the organisation if the university is not in group.
- Competition will be based on who finds the solution first.

Impact on target Audience

- Problems become visible and actionable.
- Real-world challenges become innovation opportunities.
- Solutions are developed around actual community needs.
- Improve student's networking.
- Students can work on societal problem directing them towards their social condition.

Benefits of the solution

- Encourages students to do more research.
- Student will not go outside of India for research.
- Replicate successful solution for similar type of issue.
- Brings diverse expertise together.
- Students get the opportunity to meet inspiring personalities from across India and around the world.

RESEARCH AND REFERENCES

- Government & policy references:
- Ministry of Science & Technology — Atal Innovation Mission (crowdsourced innovation model precedent)
- UGC / AICTE Institution's Innovation Council (IIC) guidelines — the existing university-industry linkage framework
- Right to Information Act, 2005 — legal basis for the RTI section your app publishes
- Digital Personal Data Protection Act, 2023 — governs how you'll handle citizen group data
- MyGov.in / Swachh Bharat citizen-reporting models — closest existing government crowdsourcing precedent
- Similar platform benchmarks (shows you researched the landscape)
- InnoCentive / HeroX — global open-innovation challenge platforms
- Kaggle — crowdsourced problem-solving precedent (different domain, same mechanism)
- Smart India Hackathon itself — as a proof-of-concept that gov+academia+industry challenge-matching works at scale
- Technical references:
- Firebase / Supabase documentation (your backend choice)
- PWA (Progressive Web App) standards — web.dev/progressive-web-apps
- W3C accessibility guidelines (WCAG) — backs your large-text/high-contrast features
